

OPTICAL ELEMENT HAVING PROGRAMMED OPTICAL STRUCTURES

09/4/5, 471

Abstract of the Disclosure

5 An optical element, such as a lightguide or an
optical film, is formed with a predetermined, programmed
pattern of optical structures. The optical structures
may be arranged to selectively correct for non-
uniformities in the output a lightguide, or may be
arranged to otherwise enhance the performance of a
10 display.
